

Data Archival Services and Accessing Public ATN Data

Satellite Data Training Course

Dr. Megan McKinzie
ATN Data Coordinator

October 25, 2024

ATN Data Assembly Center (DAC)

Satellite Telemetry Data

- Primarily from Argos platforms
- Data autoingested or manually uploaded - .txt, .csv

Metadata – 3 levels

- Provided directly from researchers
- Project – title, abstract, contacts
- Deployment – tag manufacturer, tag model, ids, species, life history, morphometrics
- Dataset – ISO 19115

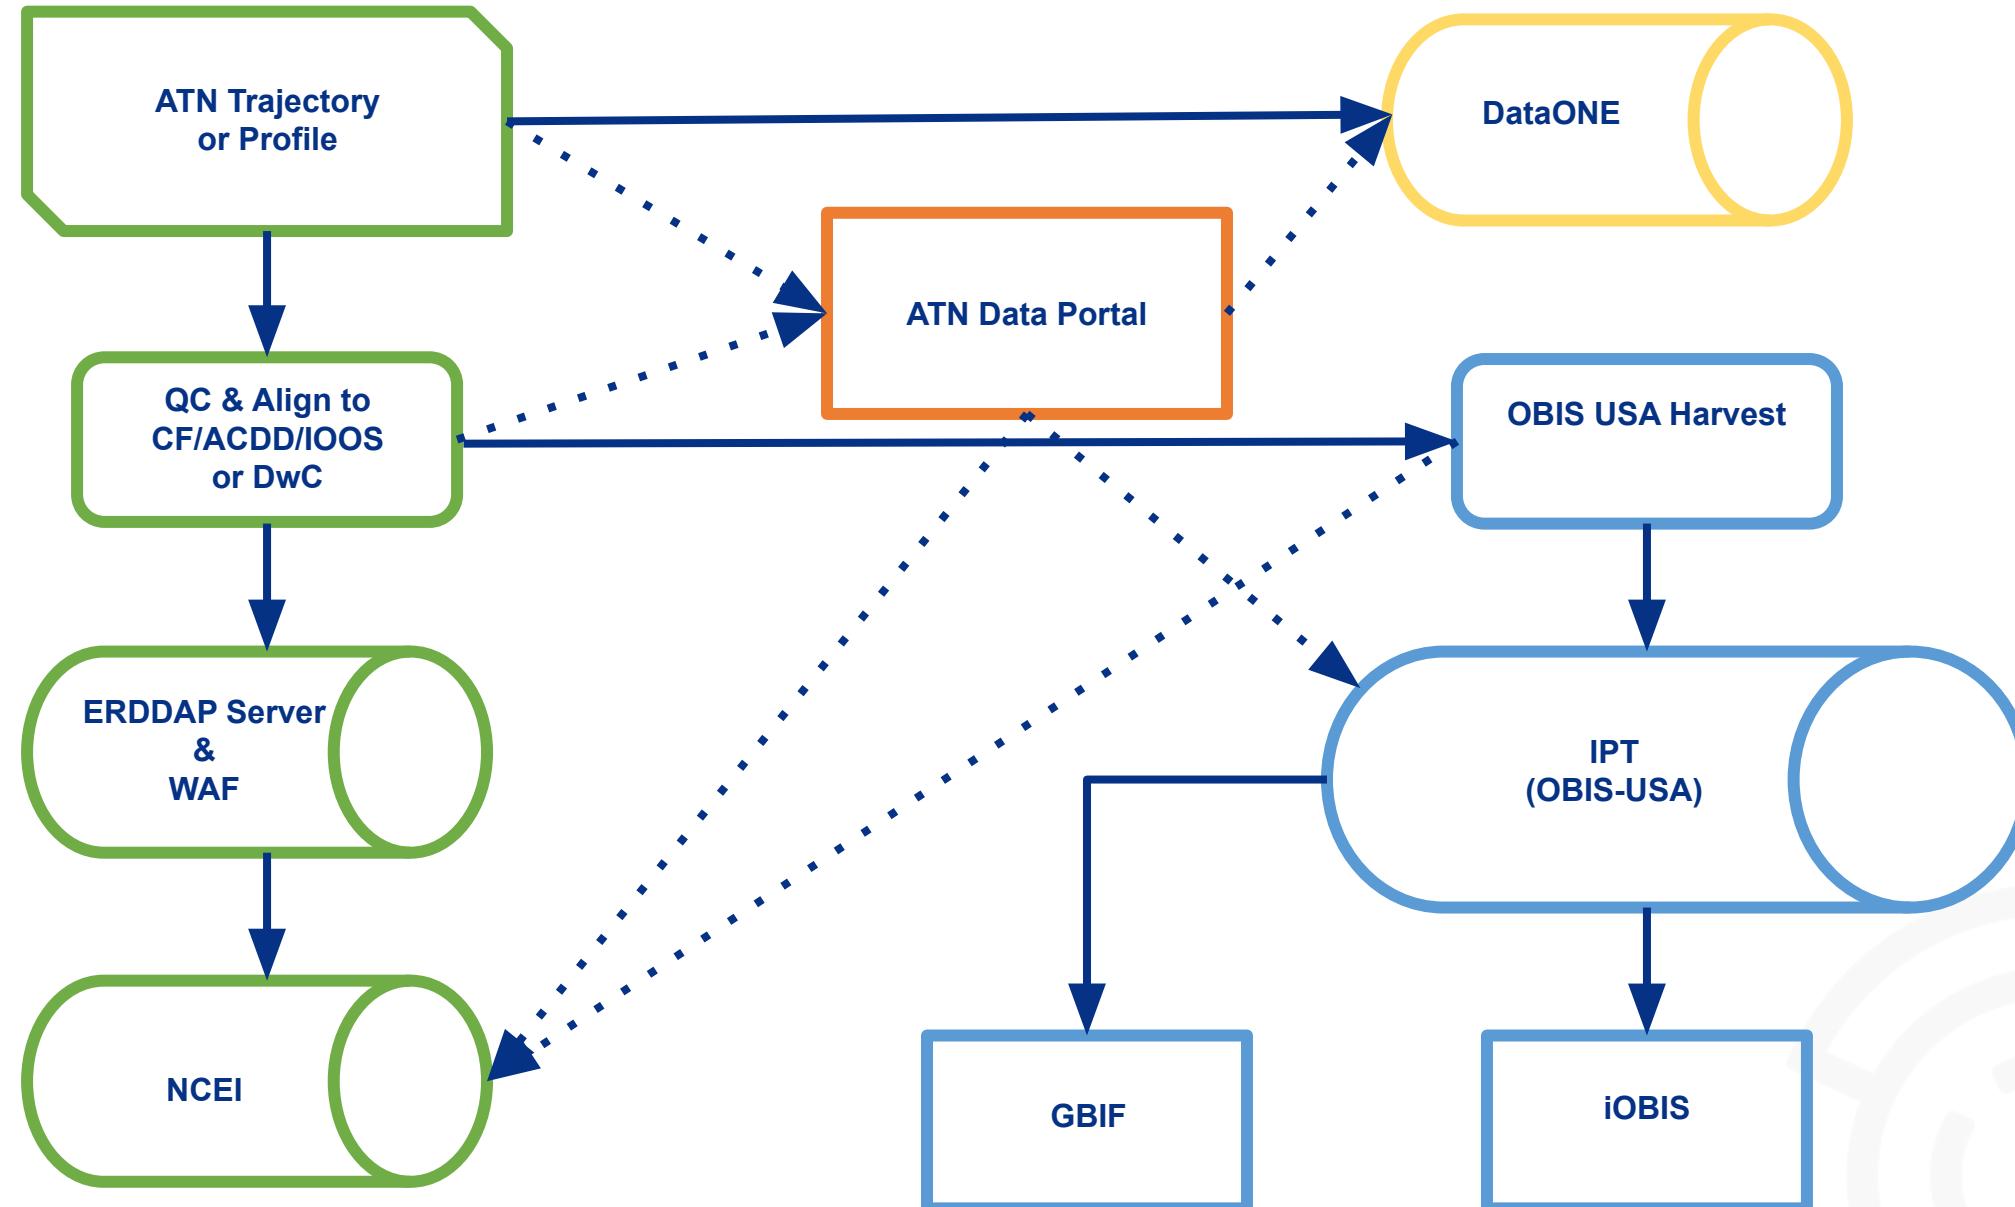

The image displays three main components of the ATN DAC:

- ATN DAC Registration/Project Submission:** A form for submitting project deployment details, requiring Email and Password.
- RESEARCH WORKSPACE:** A workspace for researchers, featuring a background image of snow-capped mountains and a text overlay: "The Research Workspace is a web-based environment for the research scientist, data manager, or engineer to store, analyze, and execute reproducible numerical work." It includes sections for "All Tag Deployments", "Real-time Tag Deployments: Past 30 Days", "Satellite Telemetry Project Inventory", and "Acoustic Telemetry Asset Inventory".
- Animal Telemetry Network Data Portal:** A dashboard with a background image of a seal underwater. It features navigation links for Home, Catalog, Map, Data views, Downloads, Settings, Share, Help, and Feedback. Below the links are four cards: "ATN Registration App" (link: <https://dacregistration.atn.ioos.us>), "Research Workspace" (link: <https://researchworkspace.com>), "ATN Data Portal" (link: <https://portal.atn.ioos.us>), and "How to submit data" (link: <https://atn.ioos.us/help/submit-data>).

ATN ANIMAL TELEMETRY NETWORK

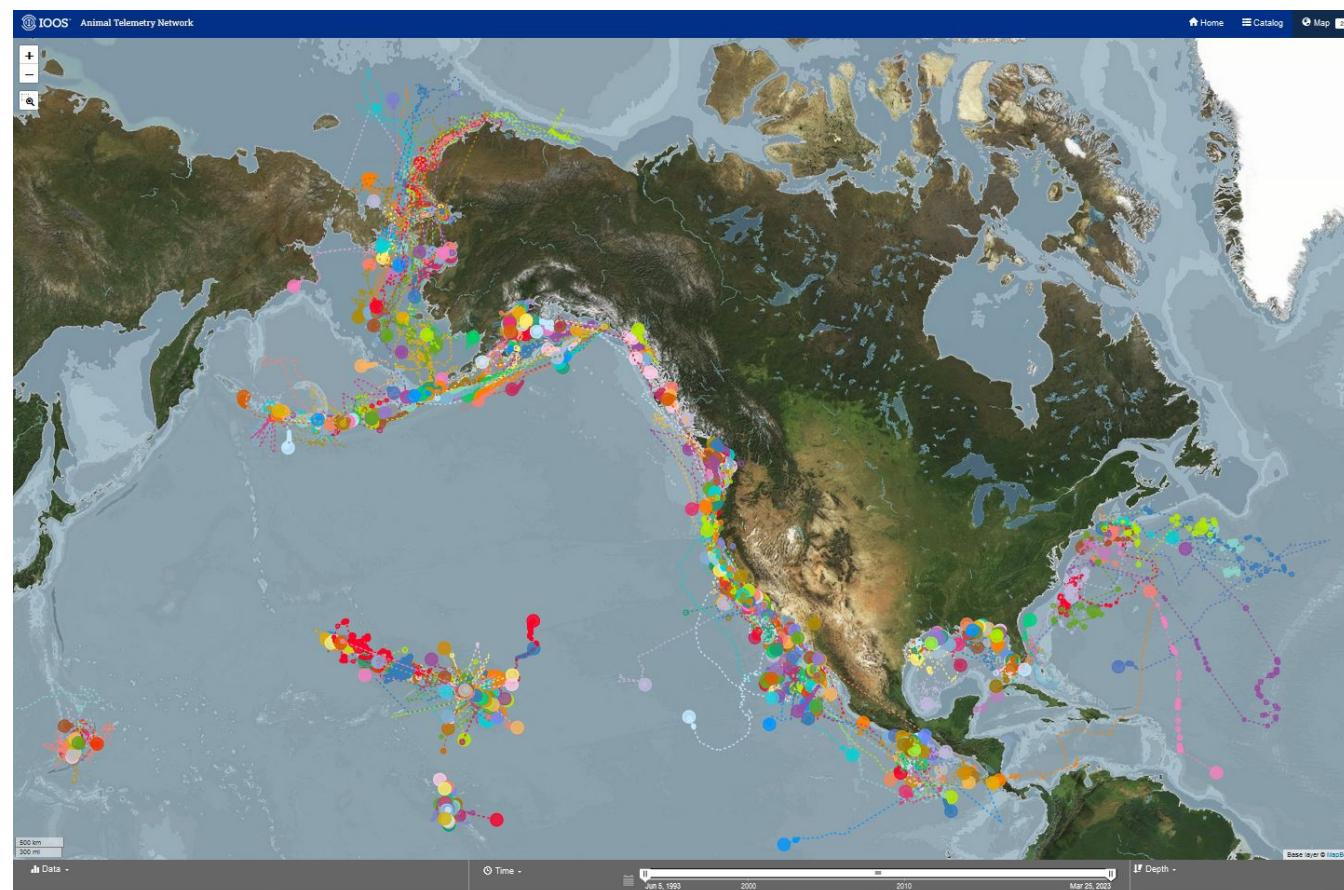

IOOS | EYES ON THE OCEAN™

ATN DAC Data Archival Pathways

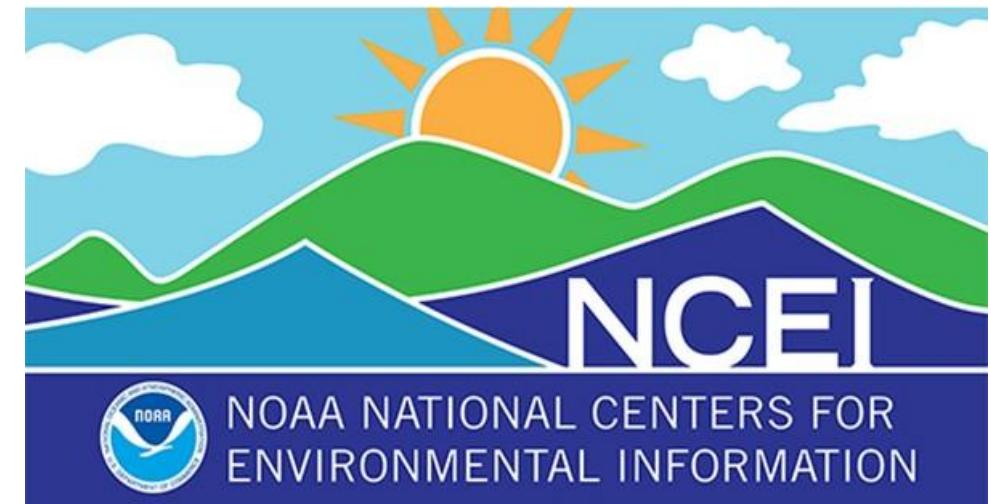

DataONE Repository – Research Workspace Member

- Long-term repository
- Manually-uploaded or auto-ingested data
- Any tag type/manufacturer
- Data type agnostic
- Recommend ISO 8601, decimal degrees, WGS84, WORMs, NERC vocabs, but not required
- Curated or raw, data not QC'd
- As datasets, under RW member node
- DOI references the specific dataset
- Flexibility
- More burden on PI or data team
- Data also available via ATN portal

NCEI Archive – ATN Collection

- Permanent archive, preferred federal repository
- Auto-ingested data
- Trajectory files; SPOT, SPLASH or SRDL
- NetCDF
- Follow CF, ACDD and IOOS standards; NERC vocabs
- QC'd raw data
- As individual deployments
- DOI references ATN collection, deployment-level accession numbers
- Little/no flexibility
- Less burden on PI or data team

NCEI – <https://ngdc.noaa.gov>
ATN Collection –

[https://www.ncei.noaa.gov/access/metadata/landing-page
/bin/iso?id=gov.noaa.ngdc:IOOS-ATN-STP](https://www.ncei.noaa.gov/access/metadata/landing-page/bin/iso?id=gov.noaa.ngdc:IOOS-ATN-STP)

Collection DOI – <https://doi.org/10.25921/wp4e-ph20>

IOOS QC Protocols - QARTOD

Quality Control Tests

1. Impossible date test
2. Impossible location test
3. Position on land*
4. Impossible speed test
5. Global range test*
6. Pressure increasing test*
7. Spike test*

Quality Control Flags

- 1 = pass
- 2 = not evaluated
- 3 = suspect or of high interest
- 4 = fail
- 9 = missing data

* CTD (profile) data only

QARTOD – <https://ioos.noaa.gov/project/qartod/>

Manual – <https://cdn.ioos.noaa.gov/media/2020/03/Argo-QC-for-CTD-and-Trajectory-Data.pdf>

NCEI Satellite Telemetry Template

QC'd data + metadata → standardized netCDF

- Trajectory template finalized
- Available on IOOS website and integrated into IOOS compliance checker
- Approved by NCEI Dataset Readiness Review Board
- netCDF 4
- Follows conventions: CF 1.9, ACDD 1.3, IOOS 1.2, NCEI 2.0
- Plus select ATN specific attributes
- Uses unidata units, ISO 8601, decimal degrees, WGS84, WoRMs
- NERC vocabularies – G04, L06, L22, S06, S10, S11
- GCMD 15.1 keywords

Abstract

Bearded seals (*Erignathus barbatus*) are one of the most important subsistence resources for the indigenous people of coastal northern and western Alaska, as well as key components of Arctic marine ecosystems. Yet, relatively little about their abundance, seasonal distribution, migrations, or foraging behaviors has been documented scientifically. Ice-associated seal populations may be negatively impacted by offshore oil and gas development as well as by climate change. Our ability to predict impacts, however, is limited by inadequate knowledge of seal population structure and foraging ecology. By working cooperatively with Alaska Native subsistence hunters we developed methods for live-capturing bearded seals in the Chukchi Sea using nets set in the shallow coastal waters where bearded seals were foraging. Capture efforts were based out of Kotzebue and various locations in the North Slope Borough from Wainwright to Barrow in June and July from 2009 to 2012. In all, 7 seals were caught (2 adults and 5 sub-adults; 4 males and three females; ranging in length and weight from 159 cm and 116 kg to 216 cm and 253 kg), all from Kotzebue Sound. Each seal was released with two different types of bio-logging devices: the SPOT5, attached to a rear flipper, provided information on the timing of hauling out and on the seal's location for up to three years. The MK10, glued to the top of a seal's head, provided the same information as well as data on the timing and depths of dives. MK10 deployments remained active up to ten months and were shed from the seal during the annual molt.

The data files within this dataset represent the 'raw' data obtained from the Wildlife Computers data portal. Each deployment (unique tag id + animal id combination) is provided as a zipped archive. The root folder also includes additional documentation. The various files and detailed column descriptions are described in the 'Spreadsheet-File-Descriptions.pdf' which was downloaded from Wildlife Computers (<https://wildlifecomputers.com/support/downloads/>). The '00_kotzeb0912_get_data.Rmd' file is an RMarkdown file that provides code and documentation of the data retrieval process. The corresponding '00_kotzeb0912_get_data.html' file is autogenerated from the RMarkdown file.

Global real-time and historical sensors

Global Sensors

This global real-time and historical sensor catalog integrates regional, national, and global real-time (past 4-hours) data across the Integrated Ocean Observing System (IOOS) enterprise. Data are from meteorologic and oceanographic observing systems operated by IOOS Regional Associations and local data providers within these regions are represented. Over 40,000 in-situ stations are represented in the map, including weather stations, stream ga...

Alaska Juvenile Steller Sea Lion Telemetry Dataset from the Eastern Aleutian Islands, 2000-2002

To better understand potential mechanisms underlying continued population declines of Steller sea lions in Alaska, we captured and deployed satellite-linked transmitters on 30 juvenile (ages 5-21 months) Steller sea lions during 2000-2003 to better understand habitat use, movements, and foraging behavior among the among the eastern Aleutian Islands. These data were used in publications of sea lion diving behavior and habitat use (Loughlin et ...

Update on Hurricane Helene's Impacts to NCEI

Help improve this site

NCEI products and services are now available. Many data products continue to be updated as a result of the outage caused by Hurricane Helene. We apologize for any inconvenience.

Marine animal satellite telemetry and profile data from the U.S. Animal Telemetry Network (ATN) Data Assembly Center (DAC) since 1992

Preview graphic

This dataset contains satellite telemetry location and profile data collected from satellite-linked archiving tags deployed on various marine animals by numerous organizations. The data were collected and submitted to the Integrated Ocean Observing System's (IOOS) Animal Telemetry Network (ATN) Data Assembly Center. These data are submitted as netCDF files to the National Centers for Environmental Information (NCEI) for ATN by Axiom Data Science.

Great white shark (*Carcharodon carcharias*) location data from satellite telemetry tag ptt 45866 deployed in the North Pacific Ocean and Papahānaumokuākea Marine National Monument by the California State University Long Beach from 2009-09-23 to 2009-11-23 (NCEI Accession 0282699)

This dataset contains satellite telemetry location data collected from a Wildlife Computers SPOT5 tag (ptt 45866) deployed on a great white shark (*Carcharodon carcharias*) by Chris G. Lowe in the North Pacific Ocean and Papahānaumokuākea Marine National Monument from 2009-09-23 to 2009-11-23. The data were collected as part of the Project White Shark: Juvenile Satellite Biotelemetry, 2001-2020 project by the California State University Long Beach. These data are submitted as netCDF files to the National Centers for Environmental Information (NCEI) for the Integrated Ocean Observing System's (IOOS) Animal Telemetry Network (ATN) Data Assembly Center by Axiom Data Science.

The Ocean Archive System searches our original datasets as they were submitted to us, not individual points or profiles. If you want to search and retrieve ocean profiles in a common format, or objectively analyzed fields, your better option may be to use one of our project applications. See: [Access Data](#)

OAS: Download accessions

Bulk downloads are limited to no more than 2000 MB per attempt.

1. [Download individual files for accession: 282699 \(directory view\)](#), or download the complete archive bundle below.

(Current version has the highest version number.)
